

## SEARCHING ON UICcareers.com

Several Engineering students have provided feedback about the new job search interface on UICCareers.com. This week we have a step-by-step guide for you about how to use UICCareers.com effectively!

1. After you log in, click on “Jobs”, then “Discover” located in the left column.
2. If you have not filled out basic profile information (mostly your contact info and expected graduation date), you will be prompted to fill out required fields before proceeding. Fill out the information, click “Save Changes”.
3. On the “Discover” page, you’ll see jobs that the system thinks you’ll be interested in, based on your profile information (major, previous jobs you’ve favorited, etc.) You’ll also be able to click to see your Favorites and Applications.
4. If you don’t see anything you like on the Discover page, you can still access the prior interface where you can see all jobs that are posted on UICCareers.com by clicking “See All Jobs,” which is just under the blue “Search” button.
5. “See All Jobs” will bring you to a page listing of all jobs and internships posted on the site. We recommend that you filter for “Position Type” (e.g. Full-time, Part-time, or Internship).
6. Although you can try filtering for “Industry” and “Job Function,” a more accurate filter for Engineering students to use would be your major because employers almost always specify which majors they’re looking for. Select your major by clicking “More Filters” and finding your major in the dropdown menu. International students may want to filter for their visa status under “Work Authorization.”
7. Once you have selected all relevant filters, you’re ready to search! Good luck on the job hunt!
